

Sue Steinke brings over twenty years of corporate and federal government experience in the areas of telecommunications, billing solutions, data storage, motorsports, and national intelligence and security.

She began her career with the Central Intelligence Agency in the mid-1980s before embarking on a new journey after moving to Colorado in the early 1990s. It was there that she launched her IT career with MCI, steadily moving up the ranks into management.

In 1999, she joined CSG Systems in Denver with responsibility for reinventing the Telephony Customer Support Team and all its policies and procedures. She later led the company's first international billing systems implementation for a large cable enterprise in Mexico. Sue then joined Quantum Corporation in Colorado Springs and eventually was named Director of Integration Management where her team created and sustained a world class Project Management Office. She was later named Quantum's Director of Global IT Operations with responsibility for maintaining and optimizing the IT infrastructure for this \$1B global enterprise.

Sue joined Yamaha Motor Corporation in Cypress, CA, as a Senior IT Management Consultant in late 2006 where she launched an IT Project Management Office and associated processes and methodologies. She was instrumental in the JSOX initiative and led cross-organizational efforts to create corporate-wide data handling and classification policies.

Sue is in the process of reinventing herself. She is looking to blend her technology, leadership, and business experience with the skills she acquired in the CIA. You never know when some of that training may come in handy in the boardroom!

A native New Yorker and rabid Yankee fan, Sue is a magna cum laude graduate of Colgate University where she played basketball and softball. She and her husband enjoy watching and playing almost all sports and are largely responsible for the success of both ESPN and Ben Gay.
